

Accela

Umbrella Management Platform

Accela is Innovile's Configuration Management solution for Mobile Networks OSS (Operation Support System).

With a user friendly web-based platform designed as a transparent management solution covering all access technologies (GSM, WCDMA and LTE), Accela provides a vendor-free operation interface that can be adapted to all vendors' OSS.

Adaption to any vendor's OSS is performed in terms of node integration, parameter changes, rehomings activities and system health check functionalities such as parameter and statistics inconsistencies.

With Accela, a state-of-the art solution, get rid of all technical drawbacks and enjoy the commercial benefits of a Multi-Vendor Network.

Data Planning – performs data planning and integration process for new nodes, on an end-to-end basis. Starts from RF data preparation via recommendation of frequencies, codes and neighbours, continues with data transmission and ends up with the generation of an executable integration file ready to be imported by the related vendor's OSS.

Operational Support – acts as a vendor-free interface for basic OSS functionalities. Performs parameter changes, rehomings, node creation and deletion activities in a standard way applicable to any vendor's OSS. Do not struggle with various Vendor OSS, let Accela deal with them for you...

Consistency Analysis – pinpoints any single inconsistency in your network regardless how big and complex it is and how many vendors/technologies are being used. Gives both executive level reports and detailed analysis of any parameter conflicts.

KEY BENEFITS

- Improve **90%** of your Time and Resource efficiency optimisation, by performing accurate and fast node integration: speed up process and decrease integration delay from 2 days to **10 minutes only** with an automated process.
- Cost reduction up to **25%** for new site investment. Get accurate RF data recommendations with intelligent algorithms by eliminating the need for initial tuning and drive test after new node integration.
- Cost reduction up to **100%** in 3rd party solutions. Change parameters – single or bulk– easily, quickly and with great accuracy. No need for any Vendor OSS know-how, No need for Vendor Specific consultants or special scripts.
- Customer satisfaction is **100%**. Perform any type of rehomings – site/BSC/RNC– through a vendor-free interface and decrease rehomings time from several hours to few minutes only. No mistakes, no changed parameter values, no missing neighbours after a rehomings activity.
- Increase your inspection efficiency by **50%**. Perform all network layer parameter inconsistency inspections through Accela. Too many Vendors, too many technologies and too many parameters... don't mess up or deal with each OSS vendor for inconsistencies Accela hunts for every vendor and technology parameter inconsistency on your behalf and reports every day to executive and engineer levels.
